

Summary	<p>This course is designed to provide a coherent development of some important topics in macroeconomic analysis at a more advanced level than that of standard intermediate courses. It thus extends and deepens the work of Economics 1 and Economics 2, bridging the gap between intermediate and graduate level courses in economics, and providing insight into some recent areas of economic research activity. Throughout there is an emphasis on the application of economic principles.</p> <p>The course has a mathematical content and knowledge of calculus is assumed.</p>
Course description	<p>Topics covered are likely to be drawn from: dynamic models of unemployment and the macro-economy, international macroeconomics, the economics of banking, labour economics.</p> <p>The course is taught through a programme of lectures and tutorials. Learning-by-doing, through exercise sets, is an important ingredient of the course.</p>
