

Summary	<p>This course is designed to provide a coherent development of some important topics in microeconomic analysis at a more advanced level than that of standard intermediate courses. It thus extends and deepens the work of Economics 1 and Economics 2, bridging the gap between intermediate and graduate level courses in economics, and providing insight into some recent areas of economic research activity. Throughout there is an emphasis on the application of economic principles.</p>
Course description	<p>The course has a mathematical content and knowledge of basic calculus is assumed.</p> <p>Topics covered may include asymmetric information, expected utility theory, auction theory; bargaining theory; social choice theory.</p>
